ACKNOWLEDGEMENTS

This Survey was again undertaken at the request of the Grape Industry. Funding was provided by an assessment on wine grapes plus funding from the California Table Grape Commission and the Raisin Administrative Committee. The enumeration of grape acreage in Napa, and Sonoma counties by personnel in the County Agricultural Commissioners' offices is appreciated and worthy of special attention. We also extend sincere appreciation to farm owners and operators who provided information on their individual operations. Cooperation from all contributors is greatly appreciated. Finally, a special thanks goes to the office personnel and field enumerators whose efforts and diligence makes this report possible.

FOREWORD

Since 1969, the California Agricultural Statistics Service (CASS) has recorded current acreage statistics for the California grape industry. In the late 1960's and early 70's, the major concern of the industry was the magnitude of new plantings, especially of premium varieties, in areas which up to that time had not been major grape growing regions. Of additional concern was acreage increases in already established areas. Between 1969 and 1974, total grape acreage increased by 36 percent while wine grape acreage alone increased by 118 percent. Grape acreage publications showing varietal and geographic changes have been available on an annual basis since 1971.

SURVEY METHODS

California Agricultural Statistics Service (CASS) maintains a grape acreage data base which served as the main source for questionnaire mailing. Growers on this data base were sent a questionnaire with previous reported, variety, number of vines and acreage. Recipients were asked to update the information. The CASS data base was also compared to the California Department of Pesticide Regulations (DPR). Growers not included in CASS's data base were sent a blank questionnaire and asked to provide specific information on their grape acreage. More than 16,000 parcel records were mailed to over 8,000 grape growers. Overall, more than 90 percent of the parcels were completed. Approximately 55 percent of the parcels were returned by mail, 43 percent by telephone, and 2 percent by personal interview.

June 1997

DATA CLARIFICATIONS

GENERAL: This report provides acreage data at several levels of detail. Users should be cautioned that the figures at the finest level of detail are less precise than the aggregate level data. The highest level of precision will be found at the state level for all grapes and for the three grape types (raisin, table, and wine). Less precision exists in the county data for minor varieties.

In most cases, the information was acquired from the vineyard operator. If the operator could not be reached, every effort was made to contact a source such as a nonresident owner or relative that could be expected to have definite knowledge of the operation. Only in a few instances was it necessary to visit the block and draw conclusions independently.

All reported data were carefully reviewed. Incomplete or questionable reports were resolved by secondary contact with the respondent.

BEARING AND NON-BEARING ACREAGE: For purposes of this publication, all varieties are considered non-bearing for 3 years (i.e., acres planted in 1994 would not be bearing until 1997). The only exception is Flame Seedless table grapes in Riverside County, which are of bearing age after two years.

GRAFTING: Graftings on bearing acres are recorded as planted in the previous year (i.e., Chardonnay grafted in 1996 onto a 1975 variety is recorded as planted in 1995). This assumes that grafted vines will actually bear a full crop in two years as opposed to three years for a newly planted vine.

VARIETIES: Data are provided for each variety with 50 or more total acres standing in 1996. Acreage for all other varieties are combined in "Other" categories. Care was taken to properly identify each block reported with a recognized varietal name.

Footnote 3/ on page 47 lists synonymous varietal names.

ROOTSTOCK: Most of the rootstock shown was planted in the past three years. However, some earlier plantings are included. When rootstock was budded over, the year of planting assigned to that block of grapes was the year preceding the budding. For instance, if a 1994 rootstock planting was budded over in 1996, the year of planting assigned to the selected variety was 1995. (See the above paragraph on graftings.)

PERIOD COVERED: The primary intent of the 1996 survey was to record removals of grapes since the 1995 harvest and new planting of grapes during 1996. Acreage abandoned in 1996 was excluded from bearing acreage. Planting activity is accounted for on a calendar-year basis.

GRAPE CRUSH DISTRICTS: Grape acreage data is also being published by grape crush districts (see Table 12). A map and description of those districts is located on the inside front cover.

ACREAGE BREAKDOWN

California's 1996 total grape acreage is estimated at 744,786 acres. This estimate is up 26,043 acres from the 1995 total of 718,743 acres. Raisin type variety grapes totaled 276,649 acres. Raisin type varieties account for 37.2 percent of the total grape acreage. Table type grapes totaled 87,987, up 2,448 acres from last season. Table type grapes represent 11.8 percent of the total grape acreage. Wine type grapes totaled 378,603 acres. Wine type grapes represent 50.8 percent of the State's grape acreage. The rootstock total is 1,547 acres, approximately 0.2 percent of the grape acreage total.

Bearing acreage of red wine type grapes increased 7,771 acres, while white wine bearing acres increased 2,689 acres. The largest wine bearing acreage increases occurred in Chardonnay, Merlot, and Zinfandel. Decreased bearing acreage included the Chenin Blanc and Carignane varieties.

Table type grape bearing acreage decreased 1,815 acres. Flame Tokay and Emperor were among the varieties with declining acres, with Redglobe and Red Crimson increasing the most.

ACKNOWLEDGMENTS

This Survey was again undertaken at the request of the Grape Industry. Funding was provided by an assessment on wine grapes plus funding from the California Table Grape Commission and the Raisin Administrative Committee. The enumeration of grape acreage in Napa, and Sonoma counties by personnel in the County Agricultural Commissioners' offices is appreciated and worthy of special attention. We also extend sincere appreciation to farm owners and operators who provided information on their individual operations. Cooperation from all contributors is greatly appreciated. Finally, a special thanks goes to the office personnel and field enumerators whose efforts and diligence makes this report possible.

FOREWORD

Since 1969, the California Agricultural Statistics Service (CASS) has recorded current acreage statistics for the California grape industry. In the late 1960's and early 70's, the major concern of the industry was the magnitude of new plantings, especially of premium varieties, in areas which up to that time had not been major grape growing regions. Of additional concern was acreage increases in already established areas. Between 1969 and 1974, total grape acreage increased by 36 percent while wine grape acreage alone increased by 118 percent. Grape acreage publications showing varietal and geographic changes have been available on an annual basis since 1971.

SURVEY METHODS

California Agricultural Statistics Service (CASS) maintains a grape acreage data base which served as the main source for questionnaire mailing. Growers on this data base were sent a questionnaire with previously reported variety, number of vines, and acreage by year planted. Recipients were asked to update the information. The CASS data base was also compared to the permit records of the California Department of Pesticide Regulation. Growers not included in CASS's data base were sent a blank questionnaire and asked to provide specific information on their grape acreage. More than 16,000 parcel records were mailed to over 8,000 grape growers. Overall, more than 90 percent of the parcels were completed. Approximately 55 percent of the parcels were returned by mail, 43 percent by telephone, and 2 percent by personal interview.

June 1998

DATA CLARIFICATIONS

GENERAL: This publication provides reported acreage data at several levels of detail. Users are reminded that this survey is designed as a complete census of all California grape growers. Errors can occur in a complete census. They are due to the inability to obtain correct information from each grape grower, differences in interpreting questions or definitions, mistakes in coding or processing the data, etc. Efforts were made to contact every grape grower and to minimize processing errors.

In most cases, the information was acquired from the vineyard operator. If the operator could not be reached, efforts were made to contact another source that could be expected to have knowledge of the operation. If this failed, large blocks were verified by personal observation. For any previous parcel record in the CASS data base and for which we could not obtain current information, the previous information was carried forward to the current report.

Readers are cautioned that this 1997 California Grape Acreage Survey will not include grapes that may have been harvested in 1997 and then removed following harvest. Therefore, a (derived) yield comparison to 1997 tonnage harvested may be distorted by acreage removed following harvest.

ROUNDING: Parcel records are carried out to the nearest tenth of an acre. In the past, totals have been rounded to the nearest acre before publication. This has required considerable hand work to then verify the totals sum correctly. In the interest of economy, we have eliminated that step in this publication.

BEARING AND NON-BEARING ACREAGE: For purposes of this publication, all varieties are considered non-bearing for 3 years (i.e., acres planted in 1995 would not be bearing until 1998). The only exception is Flame Seedless table grapes in Riverside County, which are of bearing age after two years.

GRAFTING: Graftings on bearing acres are recorded as planted in the previous year (i.e., Chardonnay grafted in 1997 onto a 1976 variety is recorded as planted in 1996). This assumes that grafted vines will actually bear a full crop in two years as opposed to three years for a newly planted vine.

VARIETIES: Data are provided for each variety with 50 or more total acres standing in 1997. Acreage for all other varieties are combined in "Other" categories. Care was taken to properly identify each block reported with a recognized varietal name.

Footnote 3/ on page 51 lists synonymous varietal names.

ROOTSTOCK: Most of the rootstock shown was planted in the past three years. However, some earlier plantings are included. When rootstock was budded over, the year of planting assigned to that block of grapes was the year preceding the budding. For instance, if a 1995 rootstock planting was budded over in 1997, the year of planting assigned to the selected variety was 1996. (See the above paragraph on graftings.)

PERIOD COVERED: The primary intent of the 1997 survey was to record removals of grapes since the 1996 harvest and new planting of grapes during 1997. Acreage abandoned in 1997 was excluded from bearing acreage. Planting activity is accounted for on a calendar-year basis.

GRAPE CRUSH DISTRICTS: Grape acreage data is also being published by grape crush districts (see Table 12). A map and description of those districts is located on the inside front cover.

ACREAGE BREAKDOWN

California's 1997 total grape acreage is reported at a record 772,973 acres. This is up 28,187 acres from the 1996 total of 744,786 acres. Raisin type variety grapes totaled 274,833 acres, down 1,816 acres from the previous year. Raisin type varieties account for 35.6 percent of the total grape acreage. Table type grapes totaled 89,862, up 1,875 acres from a year earlier. Table type grapes represent 11.6 percent of the total grape acreage. Wine type grapes totaled 407,231 acres, up 28,628 acres. Wine type grapes represent 52.7 percent of the State's grape acreage. The rootstock total is 1,047 acres, approximately 0.1 percent of the grape acreage total.

Bearing acreage of red wine type grapes increased 15,617 acres, while white wine bearing acres increased 1,936 acres. The largest wine bearing acreage increases occurred in Chardonnay, Merlot, and Zinfandel. Decreased bearing acreage included the Chenin Blanc and Sauvignon Blanc varieties.

Table type grape bearing acreage increased 2,294 acres. Flame Tokay and Emperor were among the varieties with declining acres, with Redglobe and Red Crimson increasing the most.

SURVEY METHODS

The California Agricultural Statistics Service (CASS) annually conducts an acreage survey of California grape growers. This is a continuation of a long series of annual surveys to provide grape acreage by variety and year planted. The table data are comparable with previous years'. However, for the first time, a probability survey was designed to estimate total bearing and non-bearing grape acreage.

Past acreage survey results were the sum of grower acreage reported to this office without adjustment for any incompleteness. Incompleteness is bound to exist with (1) a universe of approximately 10,000 grape growers, (2) new planting continuing unabated-including plantings by growers who have not farmed grapes before, and (3) data dependent upon voluntary cooperation.

For the table data, 7,884 grape growers in the fruit data base maintained by CASS were mailed a questionnaire with previously reported crop, variety, and acreage information preprinted. Recipients were asked to update the information for removals and new plantings.

Existing grower names were also compared with pesticide permit and application data maintained by County Agricultural Commissioners and the Department of Pesticide Regulation (DPR). Additional growers were mailed blank questionnaires and asked to provide the specified information.

Questionnaires were mailed on December 26, 1998. Respondents were given six weeks to respond by mail. CASS personnel then conducted a telephone follow-up. Field personnel personally visited large growers who did not respond by mail or telephone.

For the sample used to measure the incompleteness in the above activity, 509 growers were selected from the 1998 DPR application file. The sample was selected based on indicated size of operation (i.e., larger growers had a much greater chance of selection than those with small acreages). Growers were contacted in early May. The sample was expanded to the State level to give acreage incompleteness for bearing and non-bearing acreage.

DATA CLARIFICATIONS

Bearing and Non-bearing Acreage: For purposes of this publication, all varieties are considered non-bearing for three years (i.e., acres planted in 1996 would not be bearing until 1999). The only exception is the Flame Seedless table type grape in Riverside County, which is of bearing age after two years.

Grafting: Graftings on bearing acres are recorded as planted in the previous year (i.e., Chardonnay grafted in 1998 onto a 1977 variety is recorded as planted in 1997). This assumes that grafted vines will actually bear a full crop in two years as opposed to three years for a newly planted vine.

Varieties: Data are provided for each variety with 50 or more total acres standing in 1998. Acreage for all other varieties are combined in "Other" categories. Care was taken to properly identify each block reported with a recognized varietal name.

Rootstock: Most of the rootstock shown was planted in the past three years. However, some earlier plantings are included. When rootstock was budded over, the year of planting assigned to that block of grapes was the year preceding the budding. For instance, if a 1996 rootstock planting was budded over in 1998, the year of planting assigned to the selected variety was 1997. (See Grafting.) Nursery rootstock is not included.

Period Covered: The primary intent of the 1998 survey was to record removals of grapes since the 1997 harvest and new planting of grapes during 1998. Acreage abandoned in 1998 was excluded from bearing acreage. Planting activity is accounted for on a calendar-year basis.

Grape Crush Districts: Grape acreage data is also being published by grape crush districts (Table 12). A map with descriptions of those districts is located on the inside front cover.

RESULTS

California's 1998 grape acreage is estimated by the California Agricultural Statistics Service at a record 886,000 acres. The breakdown by type is as follows: Raisin type totaled 281,000 acres with 275,000 bearing and 6,000 non-bearing; Table type totaled 98,000 acres with 83,000 bearing and 15,000 non-bearing; Wine type totaled 507,000 acres with 385,000 bearing and 122,000 non-bearing.

This estimate is based on a statistical sample initiated to provide an unbiased indication of State acreage and to measure the incompleteness in the grape data base maintained by this office. It is not comparable with past grape acreage surveys.

Table data are comparable with previous years' survey data. Of the grape acreage in our data base, the breakdown by type is as follows: Raisin type totaled 274,984 acres at 34.6 percent; Table type totaled 91,769 acres at 11.5 percent; Wine type totaled 427,281 acres at 53.7 percent. The rootstock total is 1,373 acres, approximately 0.1 percent of the grape acreage. Data users are cautioned that varietal data for the sample incompleteness may be substantially different from that above.

ACKNOWLEDGMENTS

We sincerely thank the many farm operators, owners, and management firms providing the information. Funding was provided by an assessment on wine grapes plus funding from the California Table Grape Commission and the Raisin Administrative Committee.

A special thanks is due the following office staff for the hundreds of hours spent on this project: Mitch Graham (Mathematical Statistician), Cindy Claypoole, Jean Freed, Peggy Gibson, Regina Lozano, Janell McAllister, Christy McFarland, Sarah Otter, April Sanders, and Sheryl Zazzi.

SURVEY METHODS

The California Agricultural Statistics Service (CASS) annually conducts an acreage survey of California grape growers. This is a continuation of a long series of annual surveys to provide grape acreage by variety and year planted.

Users are cautioned that this report consists of two parts:

- ▶ Estimated grape acreage – bearing, non-bearing, and total.
- ▶ Detailed data by variety, year planted, and county -- as voluntarily reported by grape growers and maintained in the CASS data base.

With perfect information, the estimated grape acreage and the detailed data would be synonymous. However, this will never be the case for the following reasons:

- ▶ A voluntary census of approximately 10,000 grape growers is unlikely to ever attain 100 percent completeness.
- ▶ It is extremely difficult for a small staff in Sacramento to detect growers that are planting grapes for the first time.
- ▶ The detailed data reflects vine removals from more than 7,000 acres during the past twelve months. Of this number, significant acreage was harvested in 1999 prior to being pulled out, and that acreage has already been removed from the detailed data.

To arrive at the estimated grape acreage, a sample was selected from the pesticide application data maintained by County Agricultural Commissioners and the Department of Pesticide Regulation. This sample was compared to the grape acreage data base as maintained by CASS. When significant discrepancies were detected, the grower was contacted to obtain additional data and the information was included in the detailed data.

The major source of the grape detailed data was a questionnaire mailed to all grape growers included on the CASS data base. The mailing was made in late December 1999 to approximately 10,000 grape growers. The questionnaire contained previously reported crop, variety, and acreage information preprinted. Producers were asked to update the information with new plantings, removals, and any other corrections; new growers were mailed a blank questionnaire. Growers were given six weeks to respond by mail. A telephone follow-up was then undertaken. Field personnel personally visited large growers who did not respond by mail or telephone.

DATA CLARIFICATIONS

Bearing and Non-bearing Acreage: For purposes of this publication, all varieties are considered non-bearing for three years (i.e., acres planted in 1997 would not be bearing until 2000). The only exceptions are the Thompson Seedless variety and all table type grapes in Imperial and Riverside counties, which are of bearing age after one year.

Grafting: Graftings on bearing acres are recorded as planted in the previous year (i.e., Chardonnay grafted in 1999 onto a 1977 variety is recorded as planted in 1998). This assumes that grafted vines will actually bear a full crop in two years as opposed to three years for a newly planted vine.

Varieties: Data are provided for each variety with 50 or more total acres standing in 1999. Acreage for all other varieties are combined in "Other" categories. Care was taken to properly identify each block reported with a recognized varietal name.

Rootstock: Most of the rootstock shown was planted in the past three years. However, some earlier plantings are included. When rootstock was budded over, the year of planting assigned to that block of grapes was the year preceding the budding. For instance, if a 1997 rootstock planting was budded over in 1999, the year of planting assigned to the selected variety was 1998. (See Grafting.) Nursery rootstock is not included.

Period Covered: The primary intent of the 1999 survey was to record removals of grapes since the 1998 harvest and new planting of grapes during 1999. Acreage abandoned in 1999 was excluded from bearing acreage. Planting activity is accounted for on a calendar-year basis.

Grape Crush Districts: Grape acreage data is also being published by grape crush districts (Table 12). A map with descriptions of those districts is located on the inside front cover.

RESULTS

California's 1999 grape acreage is estimated by the California Agricultural Statistics Service at a record 940,000 acres, up 6.1 percent from a year earlier. Bearing acreage is 790,000 and non-bearing is 150,000 acres. The breakdown by type is as follows: Raisin type totaled 286,000 acres with 279,000 bearing and 7,000 non-bearing; Table type totaled 100,000 acres with 87,000 bearing and 13,000 non-bearing; Wine type totaled 554,000 acres with 424,000 bearing and 130,000 non-bearing.

The Thompson Seedless variety -- used for raisins, fresh market, concentrate, and wine -- continues to be, by far, the leading grape planted in California. Flame Seedless is the leading table type grape. Leading wine varieties are Chardonnay and Cabernet Sauvignon.

ESTIMATED GRAPE ACREAGE 1/

Type	1998	1999	Percent Change
Raisin	281,000	286,000	+1.8
Bearing	275,000	279,000	+1.5
Non-Bearing	6,000	7,000	+16.7
Table	98,000	100,000	+2.0
Bearing	83,000	87,000	+4.8
Non-Bearing	15,000	13,000	-13.3
Wine	507,000	554,000	+9.3
Bearing	385,000	424,000	+10.1
Non-Bearing	122,000	130,000	+6.6
All Grapes	886,000	940,000	+6.1
Bearing	743,000	790,000	+6.3
Non-Bearing	143,000	150,000	+4.9

1/ Detailed data as voluntarily reported by grape growers and maintained in the CASS data base.

ACKNOWLEDGMENTS

We sincerely thank the many farm operators, owners, and management firms providing the information. Funding was provided by an assessment on wine grapes plus funding from the California Table Grape Commission and the Raisin Administrative Committee.

A special thanks is due the following office staff for the hundreds of hours spent on this project: Mitch Graham (Mathematical Statistician), Cindy Torres, Peggy Gibson, Regina Claypoole, Janell McAllister, Sarah Otter, April Sanders, Sheryl Zazzi, and Byron Austin.

SURVEY METHODS

The California Agricultural Statistics Service (CASS) annually conducts an acreage survey of California grape growers. This is a continuation of a long series of annual surveys to provide grape acreage by variety and year planted.

Users are cautioned that this report consists of two parts:

- ▶ Estimated grape acreage -- bearing, non-bearing, and total.
- ▶ Detailed data by variety, year planted, and county -- as voluntarily reported by grape growers and maintained in the CASS data base.

With perfect information, the estimated grape acreage and the detailed data would be synonymous. However, this will never be the case for the following reasons:

- ▶ A voluntary census of approximately 10,000 grape growers is unlikely to ever attain 100 percent completeness.
- ▶ It is extremely difficult for a small staff in Sacramento to detect growers that are planting grapes for the first time.
- ▶ The detailed data reflects vine removals from more than 25,000 acres during the past twelve months. Of this number, significant acreage was harvested in 2000 prior to being pulled out, and that acreage has already been removed from the detailed data.

To arrive at the estimated grape acreage, a sample was selected from the pesticide application data maintained by County Agricultural Commissioners and the Department of Pesticide Regulation. This sample was compared to the grape acreage data base as maintained by CASS. When significant discrepancies were detected, the grower was contacted to obtain additional data and the information was included in the detailed data.

The major source of the grape detailed data was a questionnaire mailed to all grape growers included on the CASS data base. The mailing was made in late December 2000 to approximately 10,000 grape growers. The questionnaire contained previously reported crop, variety, and acreage information preprinted. Producers were asked to update the information with new plantings, removals, and any other corrections; new growers were mailed a blank questionnaire. Growers were given six weeks to respond by mail. A telephone follow-up was then undertaken. Field personnel personally visited large growers who did not respond by mail or telephone.

DATA CLARIFICATIONS

Bearing and Non-bearing Acreage: For purposes of this publication, all varieties are considered non-bearing for three years (i.e., acres planted in 1998 would not be bearing until 2001). The only exceptions are the Thompson Seedless variety and all table type grapes in Imperial and Riverside counties, which are of bearing age after one year.

Grafting: Graftings on bearing acres are recorded as planted in the previous year (i.e., Chardonnay grafted in 2000 onto a 1978 variety is recorded as planted in 1999). This assumes that grafted vines will actually bear a full crop in two years as opposed to three years for a newly planted vine.

Varieties: Data are provided for each variety with 50 or more total acres standing in 2000. Acreage for all other varieties are combined in "Other" categories. Care was taken to properly identify each block reported with a recognized varietal name.

Rootstock: Most of the rootstock shown was planted in the past three years. However, some earlier plantings are included. When rootstock was budded over, the year of planting assigned to that block of grapes was the year preceding the budding. For instance, if a 1998 rootstock planting was budded over in 2000, the year of planting assigned to the selected variety was 1999. (See Grafting.) Nursery rootstock is not included.

Period Covered: The primary intent of the 2000 survey was to record removals of grapes since the 1999 harvest and new planting of grapes during 2000. Acreage abandoned in 2000 was excluded from bearing acreage. Planting activity is accounted for on a calendar-year basis.

Grape Crush Districts: Grape acreage data is also being published by grape crush districts (Table 12). A map with descriptions of those districts is located on the inside front cover.

RESULTS

California's 2000 grape acreage is estimated by the California Agricultural Statistics Service (CASS) at a record 955,000 acres. Of the total acres, 827,000 were bearing and 128,000 were non-bearing. The breakdown by type is as follows: Raisin type totaled 287,000 acres with 280,000 bearing and 7,000 non-bearing; Table type totaled 100,000 acres with 89,000 bearing and 11,000 non-bearing; Wine type totaled 568,000 acres with 458,000 bearing and 110,000 non-bearing.

The Thompson Seedless variety -- used for raisins, fresh market, concentrate, and wine -- continues to be, by far, the leading grape planted in California. Flame Seedless is the leading table type grape. Leading wine varieties are Chardonnay and Cabernet Sauvignon.

ESTIMATED GRAPE ACREAGE 1/

Type	1999	2000	Percent Change
Raisin	286,000	287,000	+ 0.3
Bearing	279,000	280,000	+ 0.4

1/ Detailed data as voluntarily reported by grape growers and maintained in the CASS data base.

ACKNOWLEDGMENTS

We sincerely thank the many farm operators, owners, and management firms providing the information. Funding was provided by an assessment on wine grapes plus funding from the California Table Grape Commission and the Raisin Administrative Committee.

Several County Agricultural Commissioners provided a significant number of individual grower changes. We would particularly acknowledge the work of the Merced, Napa, and Sonoma county staff.

A special thanks is due the following office staff for the hundreds of hours spent on this project: Kelly Albelo, Reginal Claypoole, April Camara, Pearl Gonzalez, Janell McAllister, Lupe Moreno, Sarah Otter, Jeremiah Rhine, and Sheryl Zazzi.

SURVEY METHODS

The California Agricultural Statistics Service (CASS) annually conducts an acreage survey of California grape growers. This is a continuation of a long series of annual surveys to provide grape acreage by variety and year planted.

Users are cautioned that this report consists of two parts:

- ▶ Estimated grape acreage -- bearing, non-bearing, and total.
- ▶ Detailed data by variety, year planted, and county -- as voluntarily reported by grape growers and maintained in CASS's data base.

With perfect information, the estimated grape acreage and the detailed data would be equivalent. However, this will never be the case for the following reasons:

- ▶ A voluntary census of approximately 10,000 grape growers is unlikely to ever attain 100 percent completeness.
- ▶ It is extremely difficult for a small staff in Sacramento to detect growers that are planting grapes for the first time.
- ▶ The detailed data reflects vine removals from more than 28,000 acres during the past twelve months. Of this number, significant acreage was harvested in 2001 prior to being pulled out, and that acreage has already been removed from the detailed data.

To arrive at the estimated grape acreage, a sample was selected from the pesticide application data maintained by County Agricultural Commissioners and the Department of Pesticide Regulation. This sample was compared to the grape acreage data base as maintained by CASS. When significant discrepancies were detected, the grower was contacted to obtain additional data and the information was included in the detailed data.

The major source of the grape detailed data was a questionnaire mailed to all grape growers included in CASS's data base. The mailing was made in late December 2001 to approximately 10,000 grape growers. The questionnaire contained previously reported crop, variety, and acreage information preprinted. Producers were asked to update the information with new plantings, removals, and any other corrections; new growers were mailed a blank questionnaire. Growers were given six weeks to respond by mail. A telephone follow-up was then undertaken. Field personnel personally visited large growers who did not respond by mail or telephone.

DATA CLARIFICATIONS

Bearing and Non-bearing Acreage: For purposes of this publication, all varieties are considered non-bearing for three years (i.e., acres planted in 1999 would not be bearing until 2002). The only exceptions are the Thompson Seedless variety and all table type grapes in Imperial and Riverside counties, which are of bearing age after one year.

Grafting: Graftings on bearing acres are recorded as planted in the previous year (i.e., Chardonnay grafted in 2001 onto a 1979 variety is recorded as planted in 2000). This assumes that grafted vines will actually bear a full crop in two years as opposed to three years for a newly planted vine.

Varieties: Data are provided for each variety with 50 or more total acres standing in 2001. Acreage for all other varieties are combined in "Other" categories. Care was taken to properly identify each block reported with a recognized varietal name.

Rootstock: Most of the rootstock shown was planted in the past three years. However, some earlier plantings are included. When rootstock was budded over, the year of planting assigned to that block of grapes was the year preceding the budding. For instance, if a 1999 rootstock planting was budded over in 2001, the year of planting assigned to the selected variety was 2000. (See Grafting.) Nursery rootstock is not included.

Period Covered: The primary intent of the 2001 survey was to record removals of grapes since the 2000 harvest and new planting of grapes during 2001. Acreage abandoned in 2001 was excluded from bearing acreage. Planting activity is accounted for on a calendar-year basis.

Grape Crush Districts: Grape acreage data is also being published by grape crush districts (Table 10). A map with descriptions of those districts is located on the inside front cover.

RESULTS

California's 2001 grape acreage is estimated by the California Agricultural Statistics Service (CASS) at 951,000 acres. Of the total acres, 844,000 were bearing and 107,000 were non-bearing. The breakdown by type is as follows: Raisin type totaled 283,000 acres with 276,000 bearing and 7,000 non-bearing; Table type totaled 98,000 acres with 88,000 bearing and 10,000 non-bearing; Wine type totaled 570,000 acres with 480,000 bearing and 90,000 non-bearing.

The Thompson Seedless variety -- used for raisins, fresh market, concentrate, and wine -- continues to be, by far, the leading grape planted in California. Flame Seedless is the leading table type grape. Leading wine varieties are Chardonnay and Cabernet Sauvignon.

ESTIMATED GRAPE ACREAGE 1/

Type	2000	2001	Percent Change
Raisin	287,000	283,000	-1.4
Bearing	280,000	276,000	-1.4

1/ Detailed data as voluntarily reported by grape growers and maintained in the CASS data base

ACKNOWLEDGMENTS

We sincerely thank the many farm operators, owners, and management firms providing the information. Funding was provided by an assessment on wine grapes plus funding from the California Table Grape Commission. The raisin industry did not fund the acreage survey this year so the raisin variety data are not included in this report.

Several County Agricultural Commissioners provided a significant number of individual grower changes. We would particularly acknowledge the work of the Merced, Napa, and Sonoma county staff.

A special thanks is due the following office staff for the hundreds of hours spent on this project: Kelly Albelo, Pamela Benner, Regina Claypoole, April Camara, Pearl Gonzalez, Ann Jehn, Janell McAllister, Lupe Moreno, Jeremiah Rhine, and Sheryl Zazzi.

Synonyms for Grape Variety Names

(First synonym listed was used for this publication.)

Alicante Bouschet -- Alicante
Beauty Seedless -- Black Beauty
Black Corinth -- Zante Current
Black Prince -- Rose of Peru
Burger -- Monbadon
Chardonnay -- Pinot Chardonnay
Cinsault or Cinsaut -- Black Malvasia
Emerald Seedless -- Black Seedless
Flame Seedless -- Red Flame
Gamay (Napa) -- Valdiguié
Gray Riesling -- Trouseau Gris
Grenache -- Grenache Noir
Italia -- Muscat Italia
Malaga -- White Malaga

Malvasia Bianca -- Vennentino -- Vermintino
Marechal Foch -- Foch
Mataro -- Mourvedre
Meunier -- Pinot Meunier
Muscat Blanc -- Muscat Canelli
Muscat Hamburg -- Black Muscat
Negrette -- Pinot St. George
Nero D'avola -- Calabrese
Olivette Blanche -- Lady Finger
Palomino -- Golden Chasselas
Pinot Gris -- Pinot Grigio
Portugieser Blauer -- Blue Portugues
Red Crimson -- Crimson Seedless
Red Globe -- Rose Itó

Refosco -- Mondeuse
Ribolla Gialla -- Rebolla
Rubired -- Tintoria
Ruby Seedless -- King Ruby
Sangiovese -- Sangiovese -- Brunello
Sauvignon Vert -- Muscadelle
St. Emilion -- Ugni Blanc -- Trebbiano
Sugraone -- Superior Seedless
Syrah -- Syrah Noir -- French Syrah -- Shiraz
Tempranillo -- Valdepenas -- Tinta Roriz
Touriga Nacional -- Touriga
Trouseau -- Bastardo
White Riesling -- Johannisberg Riesling

SURVEY METHODS

The California Agricultural Statistics Service (CASS) annually conducts an acreage survey of California grape growers. This is a continuation of a long series of annual surveys to provide grape acreage by variety and year planted.

Users are cautioned that this report consists of two parts:

- ▶ Estimated grape acreage -- bearing, non-bearing, and total.
- ▶ Detailed data by variety, year planted, and county -- as voluntarily reported by grape growers and maintained in CASS's data base.

With perfect information, the estimated grape acreage and the detailed data would be equivalent. However, this will never be the case for the following reasons:

- ▶ A voluntary census of approximately 10,000 grape growers is unlikely to ever attain 100 percent completeness.
- ▶ It is extremely difficult for a small staff in Sacramento to detect growers that are planting grapes for the first time.
- ▶ The detailed data reflects vine removals from more than 37,000 acres during the past twelve months. Of this number, significant acreage was harvested in 2002 prior to being pulled out, and that acreage has already been removed from the detailed data.

The major source of the grape detailed data was a questionnaire mailed to all grape growers included in CASS's data base. The mailing was made in late December 2002 to approximately 10,000 grape growers. The questionnaire contained previously reported crop, variety, and acreage information preprinted. Producers were asked to update the information with new plantings, removals, and any other corrections; new growers were mailed a blank questionnaire. Growers were given six weeks to respond by mail. A telephone follow-up was then undertaken. Field personnel personally visited large growers who did not respond by mail or telephone.

To arrive at the estimated grape acreage, the CASS grape acreage data base was compared with data provided from the pesticide application data maintained by County Agricultural Commissioners and the Department of Pesticide Regulation.

DATA CLARIFICATIONS

Bearing and Non-bearing Acreage: For purposes of this publication, all varieties are considered non-bearing for three years (i.e., acres planted in 2000 would not be bearing until 2003). The only exceptions are the Thompson Seedless variety and all table type grapes in Imperial and Riverside counties, which are of bearing age after one year.

Grafting: Graftings on bearing acres are recorded as planted in the previous year (i.e., Chardonnay grafted in 2002 onto a 1979 variety is recorded as planted in 2001). This assumes that grafted vines will actually bear a full crop in two years as opposed to three years for a newly planted vine.

Varieties: Data are provided for each variety with 50 or more total acres standing in 2002. Acreage for all other varieties are combined in "Other" categories. Care was taken to properly identify each block reported with a recognized varietal name.

Rootstock: Most of the rootstock shown was planted in the past three years. However, some earlier plantings are included. When rootstock was budded over, the year of planting assigned to that block of grapes was the year preceding the budding. For instance, if a 2000 rootstock planting was budded over in 2002, the year of planting assigned to the selected variety was 2001. (See Grafting.) Nursery rootstock is not included.

Period Covered: The primary intent of the 2002 survey was to record removals of grapes since the 2001 harvest and new planting of grapes during 2002. Acreage abandoned in 2002 was excluded from bearing acreage. Planting activity is accounted for on a calendar-year basis.

Grape Crush Districts: Grape acreage data is also being published by grape crush districts (Table 10). A map with descriptions of those districts is located on the inside front cover.

RESULTS

California's 2002 grape acreage is estimated by the California Agricultural Statistics Service (CASS) at 932,000 acres. Of the total acres, 847,000 were bearing and 85,000 were non-bearing. The breakdown by type is as follows: Raisin type totaled 279,000 acres with 273,000 bearing and 6,000 non-bearing; Table type totaled 97,000 acres with 88,000 bearing and 9,000 non-bearing; Wine type totaled 556,000 acres with 486,000 bearing and 70,000 non-bearing.

Varieties are not published for raisin type grapes because no industry funding was received. However, the Thompson Seedless continues to be the leading variety and is used for raisins, fresh market, concentrate and wine.

ESTIMATED GRAPE ACREAGE 1/

Type	2001	2002	Percent Change
Raisin	283,000	279,000	-1.4

a/ Detailed data as voluntarily reported by grape growers and maintained in the CASS data base.

ACKNOWLEDGMENTS

We sincerely thank the many farm operators, owners, and management firms providing the information. Funding was provided by an assessment on wine grapes plus funding from the California Table Grape Commission. The raisin industry did not fund the acreage survey this year so the raisin variety data are not included in this report.

Several County Agricultural Commissioners provided a significant number of individual grower changes. We would particularly acknowledge the work of the Merced, Napa, and Sonoma county staff.

A special thanks is due the following office staff for the hundreds of hours spent on this project: Kelly Albello, Pamela Benner, Regina Claypoole, Pearl Gonzalez, Ann Jehn, Janell McAllister, Lupe Moreno, Jeremiah Rhine, and Sheryl Zazzi.

Grape Variety Synonyms

Alicante Bouschet -- Alicante
Beauty Seedless -- Black Beauty
Burger -- Monbadon
Chardonnay -- Pinot Chardonnay
Cinsault or Cinsaut -- Black Malvasia
Emerald Seedless -- Black Seedless
Flame Seedless -- Red Flame
Gamay (Napa) -- Valdiguie
Grenache -- Grenache Noir
Italia -- Muscat Italia

Malaga -- White Malaga
Malvasia Bianca -- Vennentino -- Vermintino
Mataro -- Mourvedre
Meunier -- Pinot Meunier
Muscat Blanc -- Muscat Canelli
Palomino -- Golden Chasselas
Pinot Gris -- Pinot Grigio
Red Crimson -- Crimson Seedless
Red Globe -- Rose Ito
Rubired -- Tintora

Ruby Seedless -- King Ruby
Sangiovese -- Sangiovese -- Brunello
St. Emilion -- Ugni Blanc -- Trebbiano
Sugraone -- Superior Seedless
Syrah -- Syrah Noir -- French Syrah -- Shiraz
Tempranillo -- Valdepenas -- Tinta Roriz
Touriga Nacional -- Touriga
White Riesling -- Johannisberg Riesling

SURVEY METHODS

The California Agricultural Statistics Service (CASS) annually conducts an acreage survey of California grape growers. This is a continuation of a long series of annual surveys to provide grape acreage by variety and year planted.

Users are cautioned that this report consists of two parts:

- ▶ Estimated grape acreage, bearing and non-bearing -- The first table shows estimated bearing and non-bearing grape acreage by type (Page 2). The second table shows estimated wine-type grape bearing acreage by variety (Page 3).
- ▶ Detailed data by variety, year planted, and county -- As voluntarily reported by grape growers and maintained in CASS's data base.

With perfect information, the estimated grape acreage and the detailed data would be the same. However, this will never be the case for the following reasons:

- ▶ A voluntary census of approximately 10,000 grape growers is unlikely to ever attain 100 percent completeness.
- ▶ It is extremely difficult for a small staff in Sacramento to detect growers that are planting grapes for the first time.
- ▶ The detailed data reflects vine removals from more than 41,000 acres during the past twelve months. Of this number, significant acreage was harvested in 2003 prior to being pulled out, and that acreage has already been removed from the detailed data.

The major source of the grape detailed data was a questionnaire mailed to all grape growers included in CASS's data base. The mailing was made in late December 2003 to approximately 10,000 grape growers. The questionnaire contained previously reported crop, variety, and acreage information preprinted. Producers were asked to update the information with new plantings, removals, and any other corrections; new growers were mailed a blank questionnaire. Growers were given six weeks to respond by mail. A telephone follow-up was then undertaken. Field personnel personally visited large growers who did not respond by mail or telephone.

To arrive at the estimated grape acreage, the CASS grape acreage data base was compared with data provided from the pesticide application data maintained by County Agricultural Commissioners and the Department of Pesticide Regulation.

DATA CLARIFICATIONS

Bearing and Non-bearing Acreage: For purposes of this publication, all varieties are considered non-bearing for three years (i.e., acres planted in 2001 would not be bearing until 2004). The only exceptions are the Thompson Seedless variety and all table type grapes in Imperial and Riverside counties, which are of bearing age after one year.

Grafting: Graftings on bearing acres are recorded as planted in the previous year (i.e., Chardonnay grafted in 2003 onto a 1980 variety is recorded as planted in 2002). This assumes that grafted vines will actually bear a full crop in two years as opposed to three years for a newly planted vine.

Varieties: Data are provided for each variety with 50 or more total acres standing in 2003. Acreage for all other varieties are combined in "Other" categories. Care was taken to properly identify each block reported with a recognized varietal name.

Rootstock: Most of the rootstock shown was planted in the past three years. However, some earlier plantings are included. When rootstock was budded over, the year of planting assigned to that block of grapes was the year preceding the budding. For instance, if a 2001 rootstock planting was budded over in 2003, the year of planting assigned to the selected variety was 2002. (See Grafting.) Nursery rootstock is not included.

Period Covered: The primary intent of the 2003 survey was to record removals of grapes since the 2002 harvest and new planting of grapes during 2003. Acreage abandoned in 2003 was excluded from bearing acreage. Planting activity is accounted for on a calendar-year basis.

Grape Crush Districts: Grape acreage data is also being published by grape crush districts (Table 10). A map with descriptions of those districts is located on the inside front cover.

RESULTS

California's 2003 grape acreage is estimated by the California Agricultural Statistics Service (CASS) at 882,000 acres. Of the total acres, 819,000 were bearing and 63,000 were non-bearing. The breakdown by type is as follows: Raisin type totaled 260,000 acres with 255,000 bearing and 5,000 non-bearing; Table type totaled 93,000 acres with 85,000 bearing and 8,000 non-bearing; Wine type totaled 529,000 acres with 479,000 bearing and 50,000 non-bearing.

Varieties are not published for raisin type grapes because no industry funding was received. However, the Thompson Seedless continues to be the leading variety and is used for raisins, fresh market, concentrate and wine.

ESTIMATED GRAPE ACREAGE BY TYPE 1/

Type	2001	2002	2003	Percent Change
Raisin	283,000	279,000	260,000	-6.8
Bearing	276,000	273,000	255,000	-6.6
Non-Bearing	7,000	6,000	5,000	-16.7

a/ Detailed data as voluntarily reported by grape growers and maintained in the CASS data base. Totals may not add due to rounding.

ESTIMATED WINE-TYPE GRAPE BEARING ACREAGE BY VARIETY 1/

Variety	2001	2002	2003	Percent Change
Cabernet Sauvignon	63,200	70,400	74,800	6.3
Chardonnay	105,500	104,000	103,000	-1.0
Chenin Blanc	20,300	17,700	14,600	-17.5
French Colombard	44,500	39,500	34,800	-11.9
Merlot	51,000	53,500	53,400	-0.2
Rubired	12,300	14,000	13,400	-4.3
Sauvignon Blanc	13,900	13,900	13,700	-1.4
Syrah	10,800	13,400	16,100	20.2
Zinfandel	53,500	53,600	52,200	-2.6
Other Wine	105,000	106,000	103,000	-2.8
Total Wine	480,000	486,000	479,000	-1.4

1/ Reported data with an estimated allowance for incompleteness.

ACKNOWLEDGMENTS

We sincerely thank the many farm operators, owners, and management firms providing the information. Funding was provided by an assessment on wine grapes plus funding from the California Table Grape Commission. The raisin industry did not fund the acreage survey this year so the raisin variety data are not included in this report.

Several County Agricultural Commissioners provided a significant number of individual grower changes. We would particularly acknowledge the work of the Merced, Napa, and Sonoma county staff.

A special thanks is due the following office staff for the hundreds of hours spent on this project: Kelly Albello, Jeff Olson, Pam Benner, Regina Claypoole, Carol Cole, Pearl Gonzalez, Ann Jehn, Janell McAllister, Susan Young, Lupe Oropeza, Jeremiah Rhine, Cordia Weems and Sheryl Zazzi.

Grape Variety Synonyms

Alicante Bouschet – Alicante
Beauty Seedless – Black Beauty
Burger – Monbadon
Chardonnay – Pinot Chardonnay
Cinsault or Cinsaut – Black
Malvoisie, Black Malvasia
Emerald Seedless – Black Seedless
Flame Seedless – Red Flame
Gamay (Napa) – Gamay, Valdiguie
Grenache – Grenache Noir
Italia – Muscat Italia

Malaga – White Malaga
Malvasia Bianca – Vennentino – Vermintino
Mataro – Mourvedre
Meunier – Pinot Meunier
Muscat Blanc – Muscat Canelli, Muscat
Blanc A Petits Grains
Palomino – Golden Chasselas
Pinot Gris – Pinot Grigio
Red Crimson – Crimson Seedless
Red Globe – Rose Ito
Rubired – Tintoria

Ruby Seedless – King Ruby
Sangiovese – Sangioveseto – Brunello
St. Emilion – Ugni Blanc – Trebbiano
Sugraone – Superior Seedless
Syrah – Syrah Noir – French Syrah
– Shiraz
Tempranillo – Valdepenas – Tinta Ronz
Touriga Nacional – Touriga
White Riesling – Johannisberg Riesling,
Riesling

* Synonyms for variety names are shown on Page 3.

1/ Totals may not add due to rounding.

2/ Non-bearing years are 2001, 2002, and 2003. Thompson Seedless and all table grapes begin bearing after one non-bearing year in Riverside and Imperial counties.

* Synonyms for variety names are shown on Page 3

1/ Totals may not add due to rounding.

2/ Non-bearing years are 2001, 2002, and 2003. Thompson Seedless and all table grapes begin bearing after one non-bearing year in Riverside and Imperial counties.
